

Our solutions
all you need for telematics

Didcom is an engineering and development company technological, focused on offering solutions technology in the areas of electronic engineering, communication infrastructure, software development and specialized products for the industry and sector of motor transport

We offer to the international market complete solutions of Hardware, Software and Firmware, backed with custom support and more than 10 years of experience, time in which we have Managed to obtain a series of patents that legitimize our level of innovation.

We specialize in strengthening the monitoring functions of the condition of vehicle fleets, their drivers and engines, at design developments that reduce costs, improve operational efficiency, analyze the different problems, detect trends in component failures, replace maintenance corrective by predictive, predict user satisfaction, among many other points of interest.

Custom development what you want as you need it

We are passionate about promoting a culture of innovation that perfects the operation of the production chain through designs, developments and integrations of computer electronic systems; We build cutting-edge technological solutions, according to the specific needs of the market and our customers, always based on imagination and innovation for their growth and consolidation

Hardware

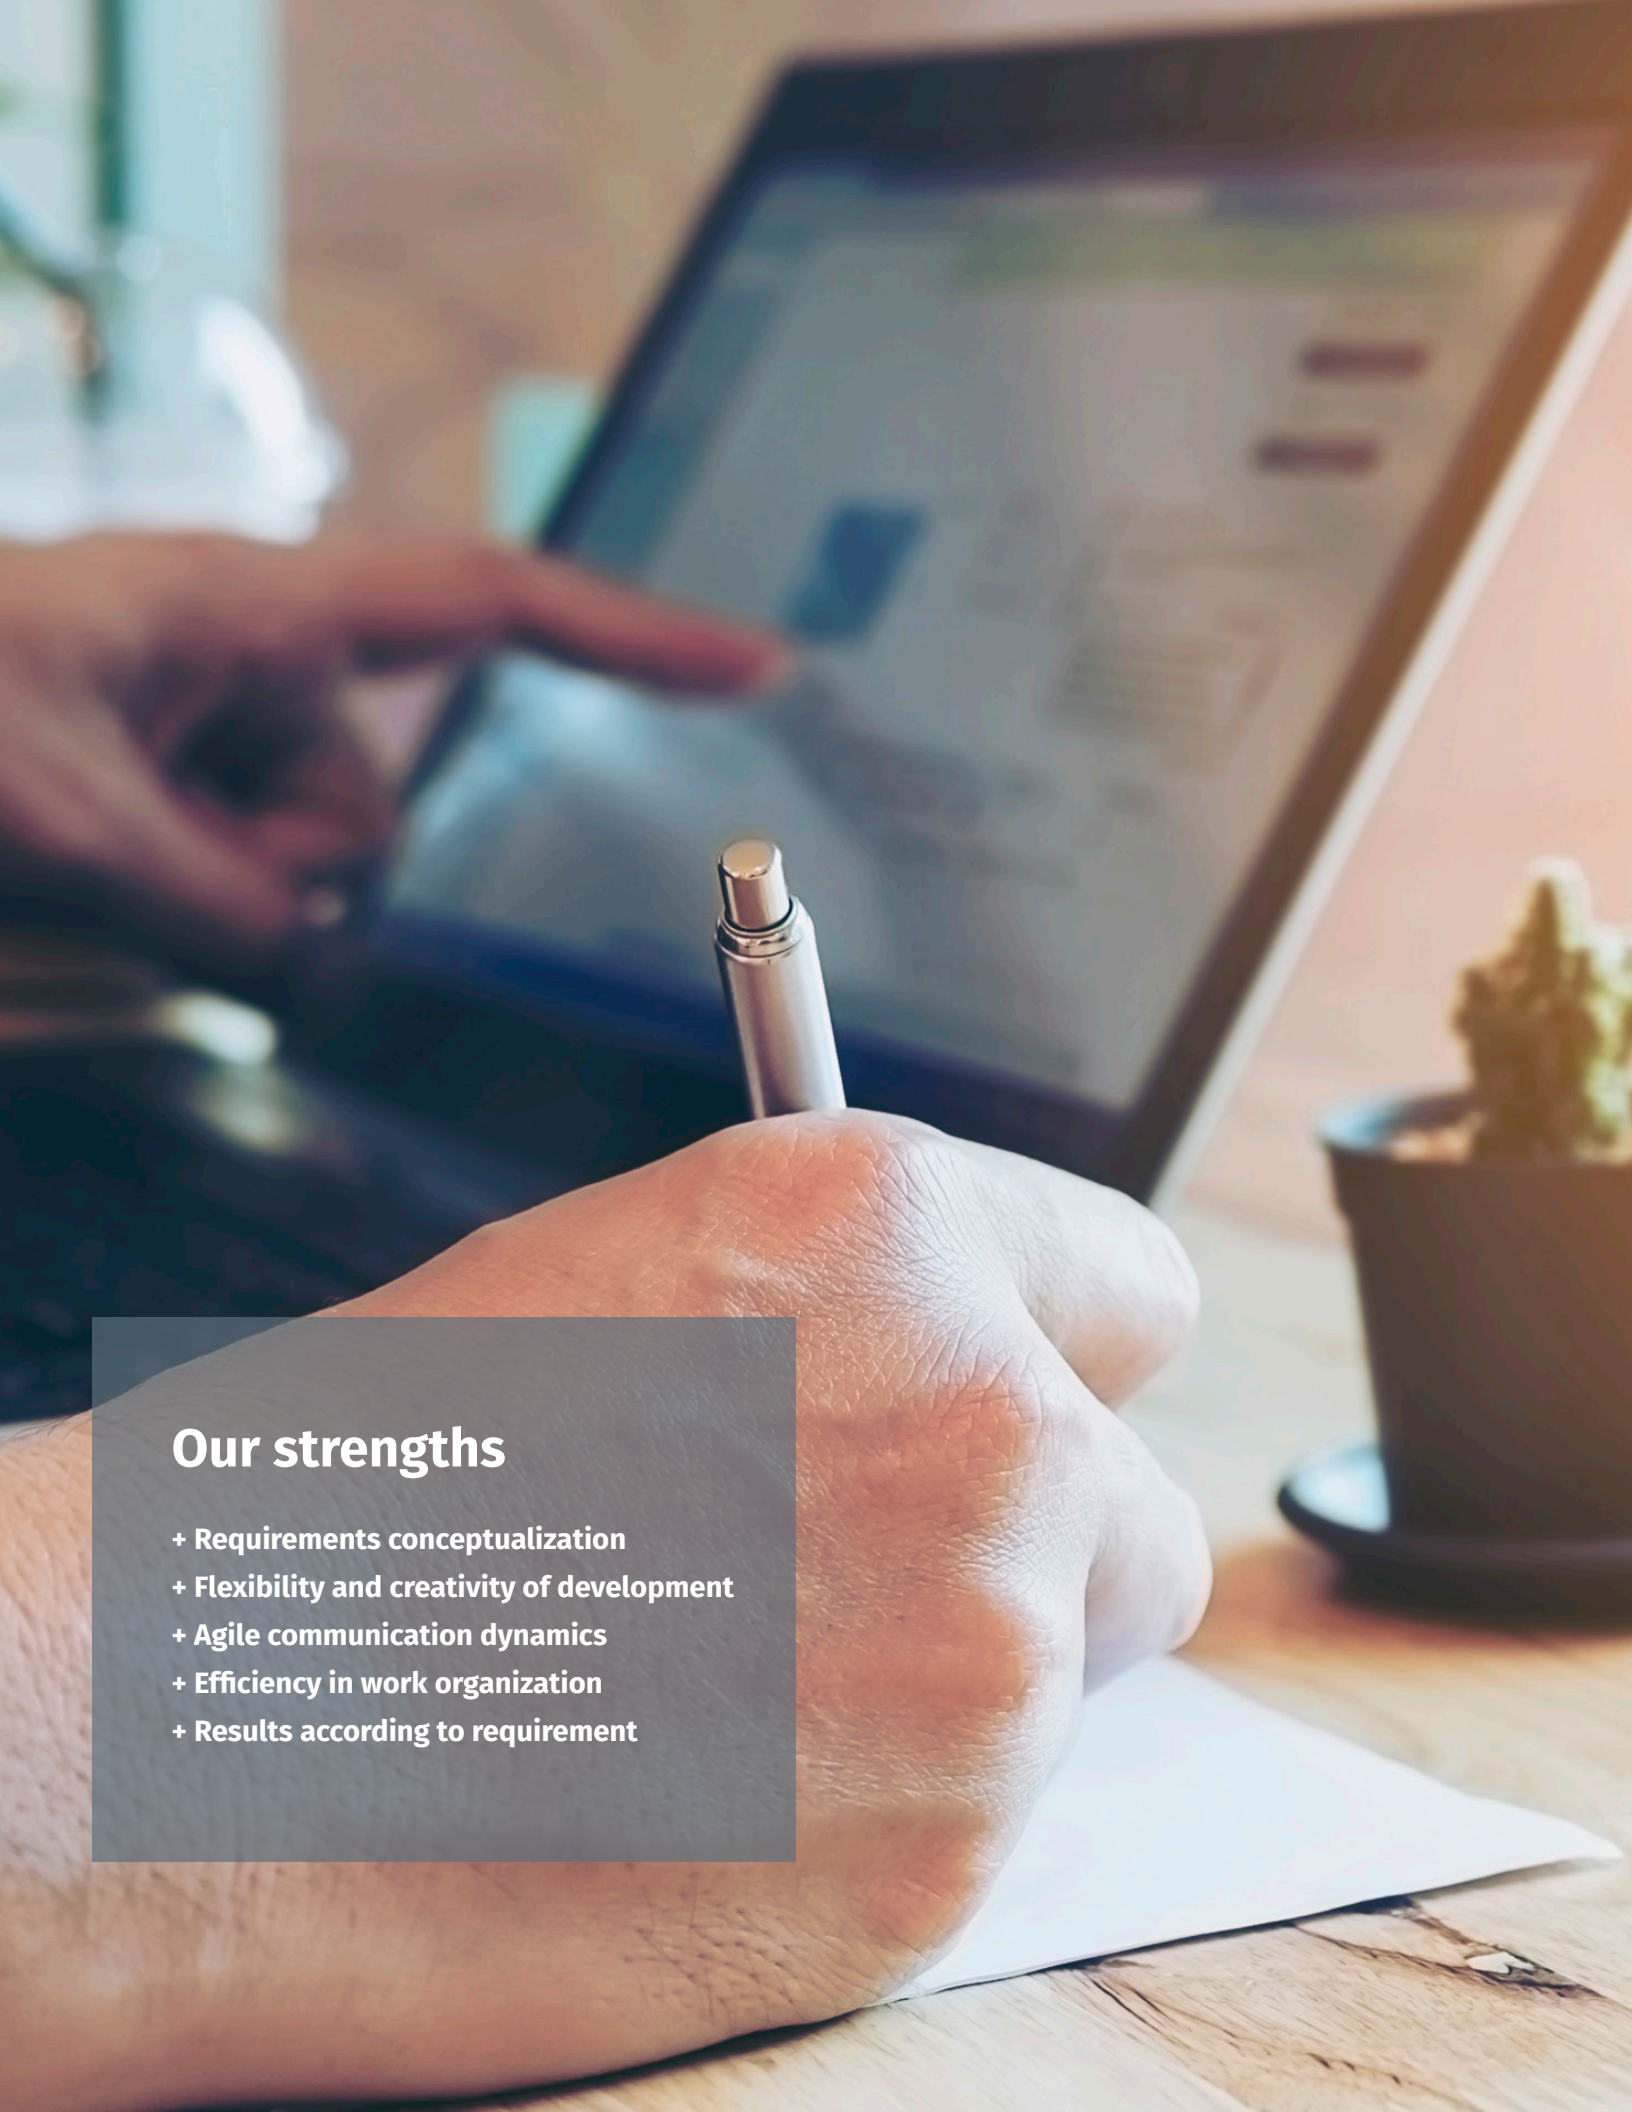

Firmware

Software

Our strengths

- + Requirements conceptualization
- + Flexibility and creativity of development
- + Agile communication dynamics
- + Efficiency in work organization
- + Results according to requirement

Our work methodology

Our technological developments are oriented in capitalize business decisions, implement strategies and measure the operation, all with the purpose of generating a value added to the interpretation of the information to facilitate operational decisions in a dynamic and simple way.

Products that provide real solutions

We offer a wide catalog of products, specially developed for needs of the motor transport industry.

EPC DIDCOM
ENGINE PROTOCOL
CONVERTER

Convert information into operation indicators

The solution for your needs in Health and Engine Analysis

Multi brand automotive protocol reading device which converts CAN proprietary protocols of different speeds to the J1939 standard protocol, obtaining as a result parameters and fault codes, also works as a filter bypass which only allows readings of different parameters under programming.

DMI DIDCOM
MASTER
INTERFACE

DSI DIDCOM
SENSORS
INTERFACE

Scale logistics intelligence in transport

The solution for your needs in Sensor Monitoring

Integration and staggering device of different types of sensors quickly and easily, its main feature is its flexibility of growth and adaptation according to the need.

Get traceability of use and avoid coupling errors

The solution for your Trailer Identification needs

Devices that monitor and identify the trailer connected to the truck quickly and easily, with real-time information on the location, date and time of the coupling and verification of the trailer ID assigned to the truck.

Provides passenger safety on board and controls the capacity

The solution for your Passenger Identification needs

Device that monitors and identifies the industrial and student passage, through RFID control, registers the passenger each time he approaches or descends from the vehicle unit, linking these data with the GPS positioning, provides the security that the passenger uses transportation in the corresponding geographical points.

Remotely control the functionality of your fleet

The solution for your needs in Remote Status Control

Device that controls activation or deactivation of signals (I / O) of any accessory or device in a safe and remote way. Before each instruction, a password is requested from the user and then a token, measures with which the good use, responsibility and security of the event is guaranteed.

Supervises and ensures compliance with the cold chain

The solution for your needs in Temperature Monitoring

Temperature monitoring kit, and precise control of the ambient temperature ranges in different regions of the vehicle unit using sensors, either on a passenger bus or a cold cargo trailer food delivery truck.

Efficientize fuel through driving analysis

The solution for your Fuel Performance Monitoring needs

Device that notifies the fuel efficiency in the operation continuously, with analysis of the behavior of the parameters that directly influence its result.

Analyze the operation and protect your engine automatically

The solution for your needs in Engine Analysis and Protection

Device that interprets and records in real time the different parameters that are available in the CAN communication network to know driving habits, also avoids considerable damage to the engine autonomously, protecting it from operating conditions out of range and acting at the moment.

If it can be measured,
can be improved

Yojanan Cornejo Chait
CEO didcom

Our values

In didcom, dynamism, capacity has always been valued, the effort, professionalism and especially teamwork to generate and apply new knowledge that allows us to offer high quality technology products and services, but most importantly that we always highlight are our values, which they will always be the basis of our principles as a company.

Honesty

Competitiveness

Punctuality

Humanism

Integrity & loyalty

Commitment

Mission

- + We are at the forefront of telemetry technological advances
- + We encourage the imagination and creativity of our team
- + We provide optimal and efficient solutions to market needs, achieving your total satisfaction
- + We surprise our clients through excellent service and attention
- + We maintain an intelligent, transparent and efficient resource management that allows the growth and multiplication of these.
- + We offer our human capital tools and constant training for their personal, integral and professional development.

Vision

We are world leaders in cutting-edge telematics solutions specialized in transport

Our Story

Didcom , a Mexican company located in the north of the country, in the desert state of Sonora, began in 2008 dedicated to provide GPS technology services for the transport sector, then began to devise technological solutions that complement the vehicle location.

The meaning of DIDCOM is composed of 3 words, “Digital Dynamic Communications” that describe the vision of our company to build communication platforms that dynamically and according to the needs of each client, generate useful information for decision making.

During the first years, we learned to identify the origin of the operative problem that was required to solve by our clients, this is where we detected our area of growth and consolidation opportunity, by creating specific technological solutions for each situation.

Gradually DIDCOM begins to expand internally, creating new areas of research and development in Electronic Engineering and Software Design, with the firm purpose of developing products and services that have two essential characteristics: “Flexibility” and “Integration” with the main foundation. to grow the level of the technological solution as it was required.

We have evolved as a company according to the achievements we have had, this has offered us a sustainable growth at the level of organization and infrastructure.

More than 10 years since our inception, DIDCOM develops advanced technology solutions which are marketed internationally, having a great acceptance by users, following the formula that has opened the doors to us since our inception: customize technological solutions according to requirements specific

Our commitment

- + Always be innovative
- + Provide personalized attention

Let's talk about success

In didcom we have a commitment to our customers that is reflected in the customized products we create for them. We understand your needs, always maintaining the distinction in service, technological development and innovation to increase your operational and business profitability.

Cesar Ochoa

Innovation & Technological
Development Manager

"Didcom is a company with committed and professional staff, trained in the technologies they offer and are involved in the operation of the client's business to propose an efficient solution. They have decision and discipline in the application of the solution until the sense of urgency objective is achieved. The main differentiators of didcom are the human resource and service attitude, as well as the flexibility of its technology, which allows them to integrate into different business solutions".

Patricia Martínez

Monitoring Center Manager

"Didcom is always one step ahead of customer needs, providing efficient and safe solutions. It offers excellent service and guaranteed quality in all its products and services. They complement our decision making and help us provide a better service to our customers. We have achieved an excellent growth relationship and we have great synergy due to the focus on innovation and constant creativity that characterizes both companies".

Jesús Daniel Guerra

Management Trainee

"Didcom is a company with a high level of professionalism and a great sense of customer service. They have demonstrated to have a committed team and with great capacity to create technological solutions, that solve our needs responding with agility and with commitment of continuous improvement and constant innovation. It is a team that has a balance between youth and experience, this is reflected in its energy, creativity and technological capacity for the development of specialized solutions. The synergy between our companies has allowed us to create technological solutions tailored to meet our internal needs and those of our customers".

Eduardo Valdez

CEO

"Didcom is a young and solid company that continues to sow and reap success, not only for its innovative products, but for having the vision of leveraging on technologies and being pioneers nationwide in the constant search to solve problems and seek meet transportation needs in Mexico. They are a true strategic business partner, which allows us to offer our customers high quality hardware and software products, backed by a highly trained and committed work team. Didcom gives us importance through its staff. Its differentiator is definitely its ability to solve problems, and also offer a service that never ceases to amaze, for its commitment and flexibility".

Cesar Ortiz

Technical Services Manager

"Didcom is an effective professional company in the research and development of extensive technologies, dedicated and committed to the client to offer the best service in sales and technical support. They are always at the forefront of technologies and, above all, they always seek to innovate by improving their products. We have experienced genuine involvement and commitment before various technical challenges. As a result, it has been possible to provide together functional technological solutions to our customers. Its main differentiators are transparency and honesty, as well as fast and effective support from its technical support team and commercial team".

TRANSPAIS

- ▶ A unique product, easily adaptable, was needed to let us know if the temperature was pleasant for our passengers regardless of their location on the bus.

[Read more >](#)

This solution would become the proposal of digital transformation and offer of telematic services of MAN Truck & Bus Mexico for the Mexican market

[Read more >](#)

- ▶ New hardware should be developed to replace a discontinued one. The new hardware had to work with multiple vehicles of different brands (multiprotocol).
