

Real Time School Transport Monitor

Didcom® Buswatch monitors the students transportation services, with a registration of every passenger each time they get in and get off from the vehicle, linked with the Telematic Device and transferring the information in real time.

The BusWatch® mobile app provides real time visualization of the vehicle on route, in order for parents and students to be always on time, preventing bus misses and shortening the waiting periods at the bus stop.

Tracking every bus, stop and passenger to the destination and back

Fully integrated with the Monitoring Platform, so that all the traceability of passenger transport is georeferenced and notified in real time.

Measuring and controlling the capacity of the student transport services, providing certainty and control of user assistance to school, with real-time notifications for each passenger boarding the vehicle.
