

DCS

Didcom Customized Solution

Technology adaptable to specific requirements

DCS is a customized solution to implement functional integrations between third-party devices and the GO device in a simple and secure way. We achieve the effective implementation of specialized developments that provide solutions to specific requirements and needs in fleet operation!

The information generated by the integration is captured through the DCS device and transmitted through the GO telematics device to the platform, to be managed and visualized for consultation and analysis, promoting visibility and availability of data for efficient monitoring and management.

→ Customized technological solutions according to specific requirements and customer needs

 Flexible and adaptable for integration

 IOX protocol
Out-of-the-box design

 Fully reprogrammable for your specific use case

 Fully integrated with MyGeotab™

 Create a new solution or integrate a third-party device quickly and easily

→ High-value engineering to generate added value to our client's technology integrations

Didcom Custom Solution is an innovative solution that embodies our technological core in the design and development of technology at the hardware, firmware and software level, which allows us to offer a personalized service to the client through the integration and implementation of unique solutions according to their needs.

The quality of our developments and solutions to be completely compatible and integrated with the telematics ecosystem adds great value to its expansion capacity, standing out as innovative inventions adaptable to its evolution, allowing operational growth in time and objectives, shortening the path from technology to application.

→ Benefits

Conceptualization of requirements

Proof of concepts

Effective implementation and integration

Differentiating offer of unique high-value solutions

Agile prototype design

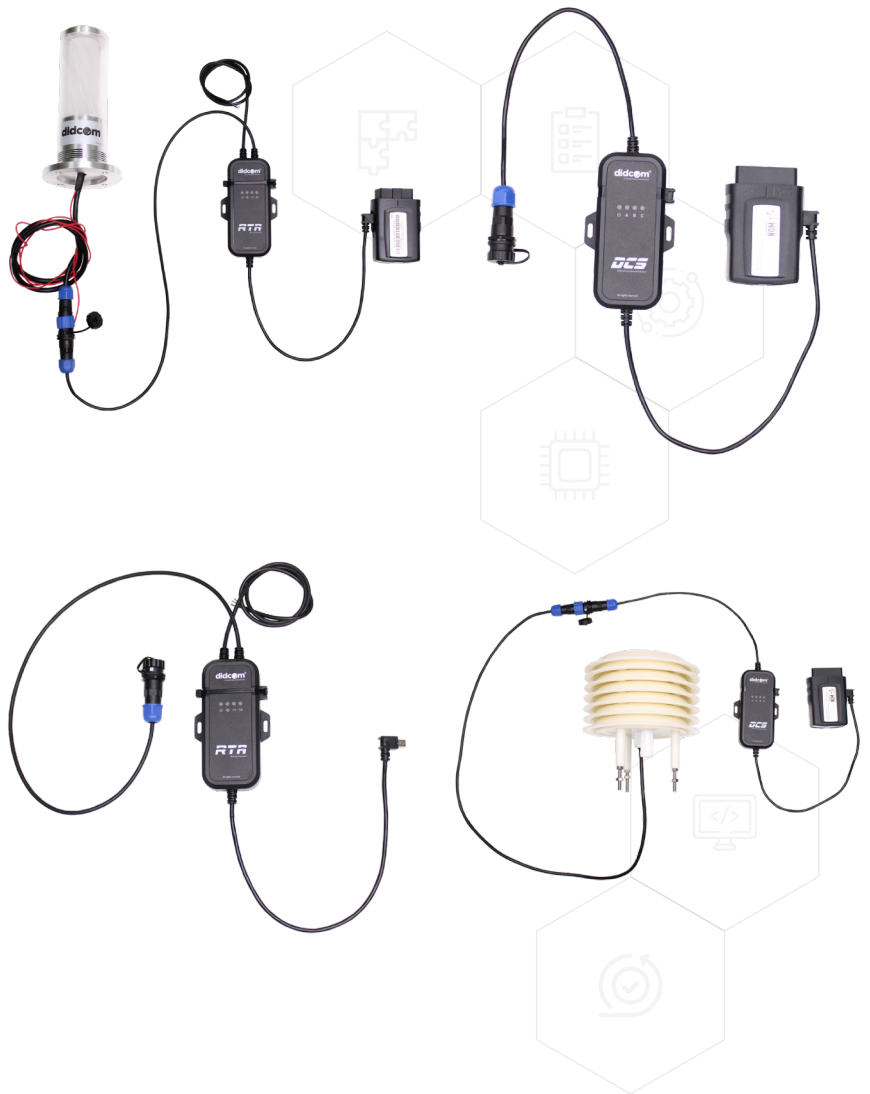

Demonstrative agility

Business consolidation and preference

→ Product and Integration

We can attend your specific requirements!
